

Setsuo Takato

It's been a full 12-year cycle since I started KeTCindy in 2014. I feel like I've finally hit my stride! Lately, I've been working on solving Wasan geometry with Maxima. The top-right image shows a web app I built to visualize this. It lets you explore the link between a triangle's inradius and the three circles inside. Give it a try!

Wishing you good health and happiness in the new year.
